

Removal of folder/sub folder from QR code image

The actual QR code image should not contain “334OS/EMS” or etc here:

Change of font

Is it possible to use a font which doesn't put the symbol inside the zeros/0 ? **Or, can the user input the font they want to use?**

Default label size

As default, can you make the label size 100x100mm? This is slightly bigger than the large size QR code which we use on projects.

output.

LABEL & PRINT

Width (mm)	Height (mm)
Physical width of the printed label.	Physical height of the printed label.
50	30

Print DPI
Dots per inch — higher means sharper but larger file size.

Size of human-readable-name

The size of the human readable name can change depending on the project... can you make a **checkbox** so it so that it **auto-adjusts** according to the label size specified above? Basically, the human readable name should only be slightly bigger or smaller in terms of width than the machine-readable bit, examples below.

600 DPI (High Quality) ▼

Tag Font (pt)
Font size of the asset tag text on the label.

10

Path Font (pt)
Font size of the folder path text below the tag.

7

Image Format
PNG for raster output, SVG for scalable vector output.

PCS-101009

PCS-101009

PCS-101009

If we let the user do a manual input, it could lead to QR codes like the one below lol. Manual font size input and a checkbox which allows for auto-sizing would be great.

And this example, where the human-readable-name is now too small:

Default DPI Quality

Please make the default DPI quality – 600 DPI (High Quality):

Print DPI
Dots per inch — higher means sharper but larger file size.

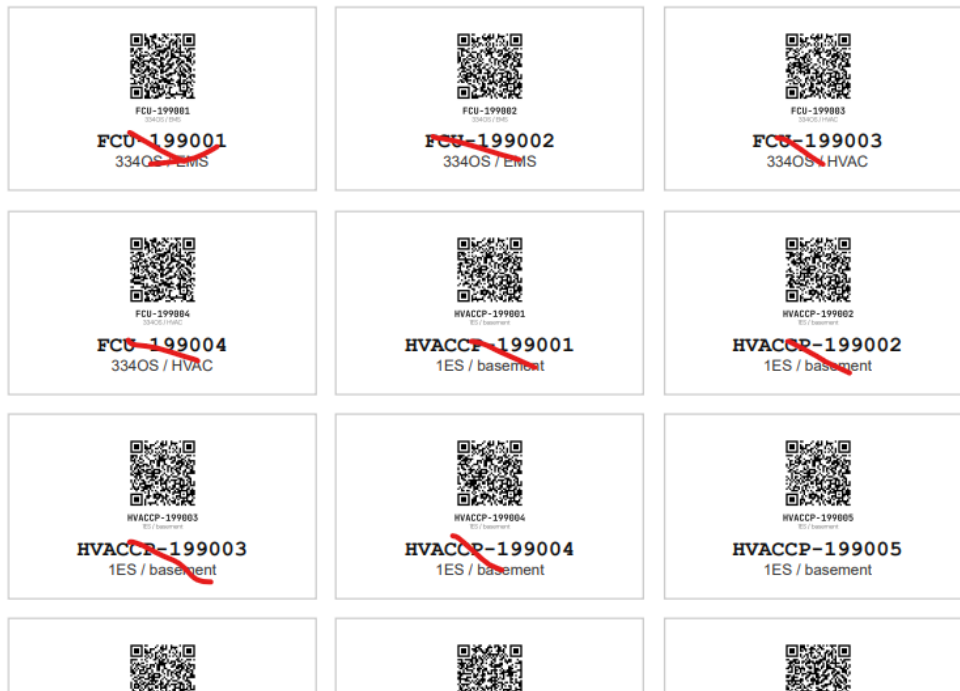

600 DPI (High Quality) ▼

Print Out Page

I like this print out page! But is it possible to have the option to remove the extra details so we can fit more QR codes on a single page? So, remove the bit under the Human-Readable-Name (the folder and sub-folder) and the QR code label:

05/03/2026, 16:04

Electracom QR Labels

Instead – the main folder can be printed on the top of each of the QR code pages. So one page of QR codes for main folder 1, one page of QR codes for main folder 2 and etc.
